Question No. 1

Your Data Guard environment has a remote physical standby database with real-time query enabled, which is used for reporting, and a logical standby database used for DSS reporting.

Switchovers or failovers are possible due to testing or in case of a disaster.

Clients use local TNSNAMES.ORA files to define connection strings to the database instances.

Which three will prevent clients from connecting to the wrong database instances? (Choose three.)

- **A.** Client TNS entries for the databases use the correct service names for the intended service.
- **B.** A service name is registered with the local listener of each database instance.
- **C.** Oracle Net connectivity to the primary database instance must be established on all the standby database instances.
- **D.** The LOCAL_LISTENER parameter on the primary database instance must always be set.
- **E.** The standby database services must be defined statically with the Listeners running on the standby database hosts.
- **F.** The DB_NAME and DB_UNIQUE_NAME parameters must be set to the same value for all the databases in the Data Guard environment.
- **G.** The client applications must use the correct TNS entries when requesting connections to the database instances.

Answer: C, D, G

Question No. 2

Which two statements are true about Far Sync instances? (Choose two.)

- **A.** They work in Maximum Availability mode.
- **B.** They work in Maximum Performance mode.
- **C.** They work in Maximum Protection mode.
- **D.** They do not work with Logical Standby databases.
- **E.** They do not work with Snapshot Standby databases.

Answer: A, C

Question No. 3

Which two are true concerning the configuring of Flashback database in a Data Guard environment? (Choose two.)

- **A.** It enables the use of far sync instances.
- **B.** It is a prerequisite for the use of Fast Start Failover.
- **C.** It permits a primary database that was disabled after failover to be reinstated as a standby.
- **D.** It permits a physical standby database to be converted to a snapshot standby database.
- **E.** It is required in order for a snapshot standby database to be converted to a physical database.

Answer: A, B

Question No. 4

Examine this command executed on a physical standby database to transition it to a logical standby

database:

```
SQL> ALTER DATABASE RECOVER TO LOGICAL STANDBY prodlogsby;
```

Which statement is true regarding the execution of this command?

- **A.** FLASHBACK is automatically enabled when transitioning to the logical standby database.
- **B.** The Managed Recovery Process (MRPO) continues applying redo up to the SCN immediately preceding the redo corresponding to the LogMiner dictionary build.
- **C.** Supplemental logging will be enabled on the logical standby database when the physical database is transitioned to the logical standby database.
- **D.** SQL apply is automatically started when transitioning to the logical standby database.
- **E.** It will automatically start redo apply.

Answer: E

Question No. 5

Which two are true about Data Guard Broker configuration parameter administration? (Choose two.)

- **A.** Changes to database properties always result in immediate updates to initialization parameters in the SPFILE even when the configuration is disabled.
- **B.** Changes to database properties that might result in changes to static initialization parameters may not be done using the Data Guard Broker.
- **C.** Changes to database properties that might result in changes to dynamic initialization parameters may be done using the Data Guard Broker when the configuration is disabled.
- **D.** An SPFILE must be used for all the databases in a configuration.
- **E.** Changes to database initialization parameters cannot be done directly for properties that are controlled by the Data Guard Broker.

Answer: D, E
