Question No. 1

Your clients are connected to distributed destinations to consume messages sent to various JMS topics.

Recently, JMS connections got interrupted due to a network failure and your clients dropped their connections as well.

How would you ensure seamless failover for your clients when a distributed destination fails? (Choose the best answer.)

- **A.** No action should be needed at the client's level if the failover is being handled properly at the cluster level.
- **B.** Set the `ClientReconnectOptions` parameter to `Automatic` in the Administration Console under the destination configuration general page.
- **C.** Implement an automatic reconnect mechanism in the client exception handler.
- **D.** Set `AutomaticClientReconnect` to `Enabled` in the Administration Console under the destination configuration general page.

Answer: C

Question No. 2

You are tasked with doing a rolling upgrade of a production domain that will minimize user interruptions.

What are two characteristics of a rolling upgrade? (Choose two.)

- **A.** Configuration changes can be made during the Rolling Update process.
- **B.** A major upgrade, for example 11g to 12c, can be accomplished with a Rolling Update.
- **C.** The machines can be upgraded in any order.
- **D.** The machine hosting the Administration Server must be upgraded first.
- **E.** Avoid configuration changes until all the servers in the domain have been upgraded.

Answer: D, E

Question No. 3

You are creating a new domain with WLST.

Identify three parameters that can be customized with the `setOption` command. (Choose three.)

- **A.** the JDK that will be used to start the domain
- **B.** the domain name
- **C.** whether or not the domain will run in production mode
- **D.** the default persistent store type for the domain
- **E.** whether or not to automatically start the Node Manager
- **F.** the default diagnostic profile for the domain

Answer: A, B, C

Question No. 4

You need to update a database accessed by an application that uses a WebLogic server data source.

It has been decided that the data source on WLS should first be shut down.

You have been asked to advise as to whether they should execute a shutdown() or a forceShutdown() on the corresponding JDBCDataSourceRuntimeMBean.

Which two statements are true regarding the impact on the application that is using that data source? (Choose two.)

- **A.** The shutdown() operation will fail if there are any reserved connections in use.
- **B.** The forceShutdown() operation will allow 20 seconds for any reserved connections in use to complete prior to destroying the connection.
- **C.** The shutdown() operation will send an HTTP 503 status code to clients.
- **D.** The forceShutdown() operation will immediately cause any in-flight transaction to be rolled back.
- **E.** The shutdown() operation will allow 20 seconds for any reserved connections in use to complete, otherwise the operation will fail.

Answer: A, D

Question No. 5

You have enabled JMS Diagnostic Logging and are analyzing JMS Message delivery and acknowledgment using the generated log entries. For this purpose, you are tracking individual message IDs.

What is the default format of the message ID that you would expect to see in the log? (Choose the best answer.)

- **A.** Hexadecimal (e.g., 0xCAE987A401)
- **B.** Numeric (e.g., 9018199222001)
- **C.** Floating Point (e.g., 10029920902.10111)
- **D.** Doubly dot delimited (e.g., 683871.1122857923566.0)

Answer: D
