## Question No. 1

Examine this function that is using the RESULT\_CACHE clause:

```
CREATE FUNCTION get_dept_addr (p_loc_id IN locations.location_id%TYPE)
  RETURN VARCHAR2 RESULT_CACHE
IS
  loc_rec locations%ROWTYPE;
BEGIN
  SELECT * INTO loc_rec FROM locations WHERE location_id = p_loc_id;
  RETURN loc_rec.street_address || ', ' || loc_rec.city || ', ' ||
         loc_rec.state_province || ' - ' || loc_rec.postal_code;
END get_dept_addr;
/
```

After executing the function twice, passing 100 and 150 as input parameters, the LOCATIONS table is updated for LOCATION\_ID = 100.

Which statement is correct if the function is called again, passing 150 as the input parameter?

- **A.** The function is executed again because the database checks for changes to the LOCATIONS table each time the function is called.
- **B.** The results are retrieved from the results cache because the LOCATIONS table was not updated for LOCATION\_ID = 150.
- **C.** The results are retrieved from the results cache because not enough rows of the LOCATIONS table were modified to cause invalidation.
