Question No. 1

An LOV must be displayed several times in your form; therefore, good performance when displaying LOV is essential. In a When-New-Form-instance trigger, you want to save the ID of the LOV in a global variable so that you can use it in any code to display the LOV.

Which built-in would you use to get the ID of the LOV?

- **A.** SHOW_LOV
- **B.** FIND_LOV
- **C.** GET_ITEM_PROPERTY
- **D.** GET_LOV_PROPERTY
- **E.** GET_APPLICATION_PROPERTY

Answer: B

Question No. 2

The Orders form, you want to enable users to use Microsoft Excel to create and print an invoice for the customer. The file should be created on the user's computer so that it can be printed with the local printer.

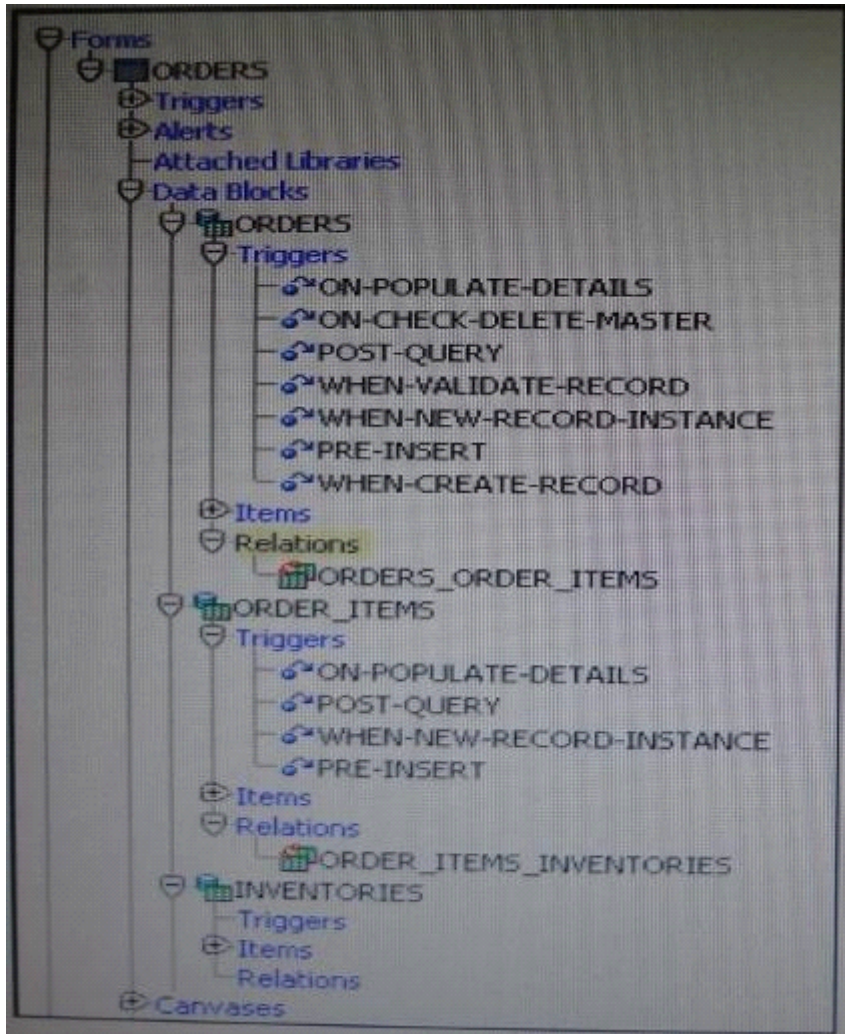

Which WebUtil package would you use to implement this requirement?

- **A.** CLIENT_GET_FILE_NAME
- **B.** CLIENT_HOST
- **C.** CLIENT_OLE2
- **D.** CLIENT_TEXT_IO
- **E.** CLIENT_Win_API
- **F.** WEBUTIL_FILE
- **G.** WEBUTIL_UTIL

Answer: C

Question No. 3

View the Exhibit.

What four facts can you determine by examining the Object Navigator?

- A. The Orders block is a detail block.
- B. The Order_Items block is a detail block.
- C. An order can be deleted only if it has no order items.
- D. If an order is deleted, all of its order items are deleted.
- E. You cannot delete order items without deleting the order.
- F. You can delete an order without deleting its order items.
- G. The Orders block is a master block.
- H. The Order_Items block is a master block.
- I. If you delete an order item, all of its associated inventory items are deleted.
- J. The inventories block is a master block.

Answer: B, C, G, H

Question No. 4

When users enter address information, you want them to be able to select the state from a static list of values. You have not used a list of states before, and there is no database table that contains state information.

What is the first step in creating such a list of values as quickly as possible?

- A. invoke the LOV wizard.
- B. Create a new record group that is based on a SQL query.

- **C.** Create a new static record group.
- **D.** Create a list item instead; a list of values is not appropriate for a static list.

Answer: A

Question No. 5

Customers log in to your Orders application by using their customer ID, which is saved as a global variable. When the Orders form first comes up, you want it to be populated with the customer's orders, and you do not want customers to be able to query for another customer's orders.

You code the following triggers:

When-New Form instance on the Orders form:

```
GO_BLOCK('orders');
```

```
EXECUTE_QUERY;
```

You also have a button in the Control block labeled Query Orders with a When-Button Pressed trigger that has the same code as the When New-Form instance trigger.

To test the form, you run it and log in a Customer 104. When you click Query Orders, all orders are shown, not just those for Customer 104.

What is the best way to correct this issue to ensure that the customer can never query another customer's orders?

- **A.** Delete the Key-Exeqry trigger and add the its first line after the call to GO_BLOCK in the When-New-Form-instance trigger.
- **B.** Change the last line of the When-Button-Pressed code to: DO_KEY ('EXECUTE_QUERY');
- **C.** Delete the Key-Exqry trigger and put its code in an On-Select trigger.
- **D.** Delete the Key-Exqry trigger and put its code in a Pre-Query trigger.

Answer: B
